

GAME PROJECT 3

STORY BACKGROUND

Journey in the War tells a story about a trip of a retired medical soldier called Jacky. In this game, the player will play this medical soldier's role to play an adventure game. As the journey continues, the plot advances, the player will finally die in the war's enemy city.

This is a story that happened in the parallel world, some of the technology like turbine engine is advanced. However, this is a technology with a high requirement for the consumption of natural resources. One of the largest countries called Eriks invaded the other country called Fricks to obtain more development resources. This war lasted for decades. Jacky participated in this war as a medical soldier from Eriks. In one battle, Jacky and his colleagues saved one wounded enemy soldier; however, this enemy shot and killed Jacky's colleague when Jacky was making a recovery for him. Jacky felt very sad. He was fired and got into jail. After the prison term, he decided to travel and prove he is not wrong to save people even though they are their enemies. In the journey, he went to the countryside to treat hurt people, but he saw Eriks' general come to this countryside, took all adult people to the battlefield, and collected high taxes from each family. After that, he continued his journey from Eriks to Fricks; he met homeless people living on the roadside and saw the whole family's dead body on the snow mountain. Finally, he arrived at the city of Fricks; he tried his best to treat hurt people in this city in battle, helped them build a tent.

CHARACTER DESIGN JACKY

He is a professional doctor from Eriks. He is kind-hearted, and he always treats people in panic; even the patient is an enemy. In this game, the player will manipulate him for the adventure. Since he is a retired medical soldier and starts a new journey, he wears his old soldier uniform with some equipment such as a medical kit, backpack, compass, and map.

CHARACTER DESIGN JOSEPH

Joseph is the general of Eriks. He wears the general uniform in the inspection activities, and his gold walking stick represents his supreme power in this country. The gold-encrusted revolver at his waist claims his dignity.

CHARACTER DESIGN JOSEPH

On the battlefield, he wears customized armor with the sign of Eriks and the cylinder hat. This idea came from the ancient plate armor, and French cap called kepi. The armor suit would protect the vital part of the body in the battle. The kepi shows his status as general in the army.

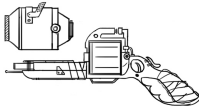

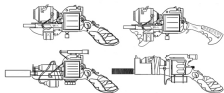

CHARACTER DESIGN

CALISTA

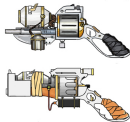

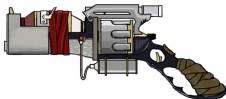

Calista is the assassin of the Eriks. She pretended the Friks noblewoman and participated in the genteel party held by politicians, military, and nobility to collect intelligence. She hates Jacky since the enemy saved by Jacky killed her husband, who is the only relative of her. Therefore, she wants revenge for her husband to kill Jacky.

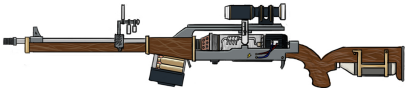

WEAPON DESIGN TURBINE REVOLVER

The turbine revolver is a usual weapon developed by Eriks' engineers. It is made by modeled metal components, including turbine machines, fuel storage, gun barrel, grip, wheel magazine, and telescope. The modularization feature allows many different kinds of modifications to this weapon. For instance, users can exchange a more powerful turbine machine and a longer barrel for increasing gun performance in a long distance scenario; users can also use a shorter bar.

WEAPON DESIGN TURBINE SNIPER RIFLE

The turbine sniper rifle is designed for snipers. The powerful turbine machine could speed up the bullet to two times of sound velocity. The bullet is a specially designed larger caliber bullet that could penetrate tank armor. In this case, this gun is equipped with more extensive fuel storage at the bottom of the gunstock.

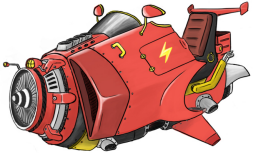

WEAPON DESIGN BURNING TURBINE CANNON

Burning turbine cannon is an individual heavy weapon using for anti-armor and anti-army soldiers. The turbine machine inside the integration provides enormous power to speed up the bullet. Since it cost a lot of fuel, there is a significant fuel bucket inside the cannon body to support the high-power turbine machine. The fuel bottle at the bottom of the cannon body is to add fire for the bullet. This function could ignite the enemy when the enemy soldiers crowd together.

VEHICLE DESIGN TURBINE SUSPENDING MOTO

Turbine suspending moto moto is equipped with one plane turbine engine. It is a single craft vehicle that provides the ability for high-speed flying. Two triangle air-inlet grilles collect the air for the turbine engine during the high-speed flying, and there are four jet exhausts at the bottom used for suspending.

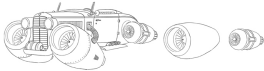

GE9X

84t	100% fuel efficiency
47000	27000
16	27000

VEHICLE DESIGN TURBINE SUSPENDING CAR

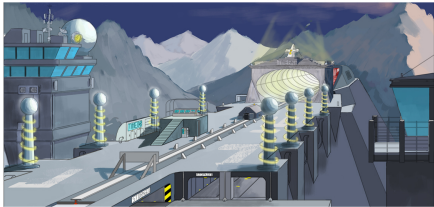

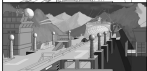

Turbine suspending car is a car equipped with four plane turbine engines. Two more significant turbine engines provide this car's leading power, two smaller turbine engines at the back control the car's driving direction. These engines are one substantial air-inlet grille that collects the air for four engines so that the fuel can be entirely burned to provide the power. This car is designed for officers.

SCENE DESIGN RUINS

This ruin is a discarded train station of Friks. It was used to resist the invade of Eriks. Jacky arrived at this place in the journey and see the wrecks of tanks, houses, and armor train.

SCENE DESIGN MILITARY BASE

This is the military base of Eriks. The general owned this project to organize a team to build a time machine. The door with light in this middle is the gate of the time machine.

SCENE DESIGN NIGHT CITY

This is a night city of Friks city. Calista pretended a noblewoman lurking in this city for several years until the great war between Friks and Eriks. This city is a prosperous city with bright light all night.
